

**Mapping current vocational rehabilitation practice and evaluating the effectiveness of vocational rehabilitation training for allied health clinicians working in traumatic injury**

Key dates	31/01/24 – 30/04/24 (survey)
Participants sought	Social workers (and other allied health clinicians) who are working in traumatic injury rehabilitation (i.e. Traumatic Brain Injury, Spinal Cord Injury, and Major Orthopaedic Trauma including traumatic amputation)
About	Our study aims to identify current vocational rehabilitation practices of allied health clinicians working traumatic injury in Australia, and their perceived vocational rehabilitation training needs. Based on the findings of our group's recent research into early vocational rehabilitation after major traumatic injury, and the results of the survey for this study, training will be developed, delivered and evaluated.
What is involved	Part 1: anonymous online survey (via Qualtrics) with additional consent sought for participation in an online qualitative interview, and to participate in training (see below) Part 2: consent to take part in our vocational rehabilitation training (which will likely be offered via an online workshop, around June-July 2024). This training will be evaluated via pre/post training surveys.
How to get involved	Please find a link for the Participant Information Sheet and access to the online consent, Qualtrics mapping survey and links for further consents (survey currently open until 30/04/24): <a href="https://drive.google.com/file/d/1MJnFj5bIKALxw_X_dTSi6ZYFsdIjpZKT/view?usp=drive_link">https://drive.google.com/file/d/1MJnFj5bIKALxw_X_dTSi6ZYFsdIjpZKT/view?usp=drive_link</a>
